Session 4: Digital libraries basics
Part 1: What should I know about digital libraries?

Speaker: Marcin Werla (mwerla@man.poznan.pl)

Education and Culture DG

Culture Programme

What is a digital library for end user?

- Library gives users access to its collections of physical objects
 - borrowing (and returning)
 - reading in the reading room
 - is located in certain physical place
 - has certain opening times
- Digital library gives users access to its collections of digital objects
 - copying (no “returning”)
 - reading on-line (optionally with some security constraints)
 - is located in virtual place (some WWW address)
 - is open 24/7

Physical object vs digital object

Function	Physical object	Digital object
Discovery	Catalogue card	Metadata record
Identification	Call mark	URI
Use	Physical content	Digital content

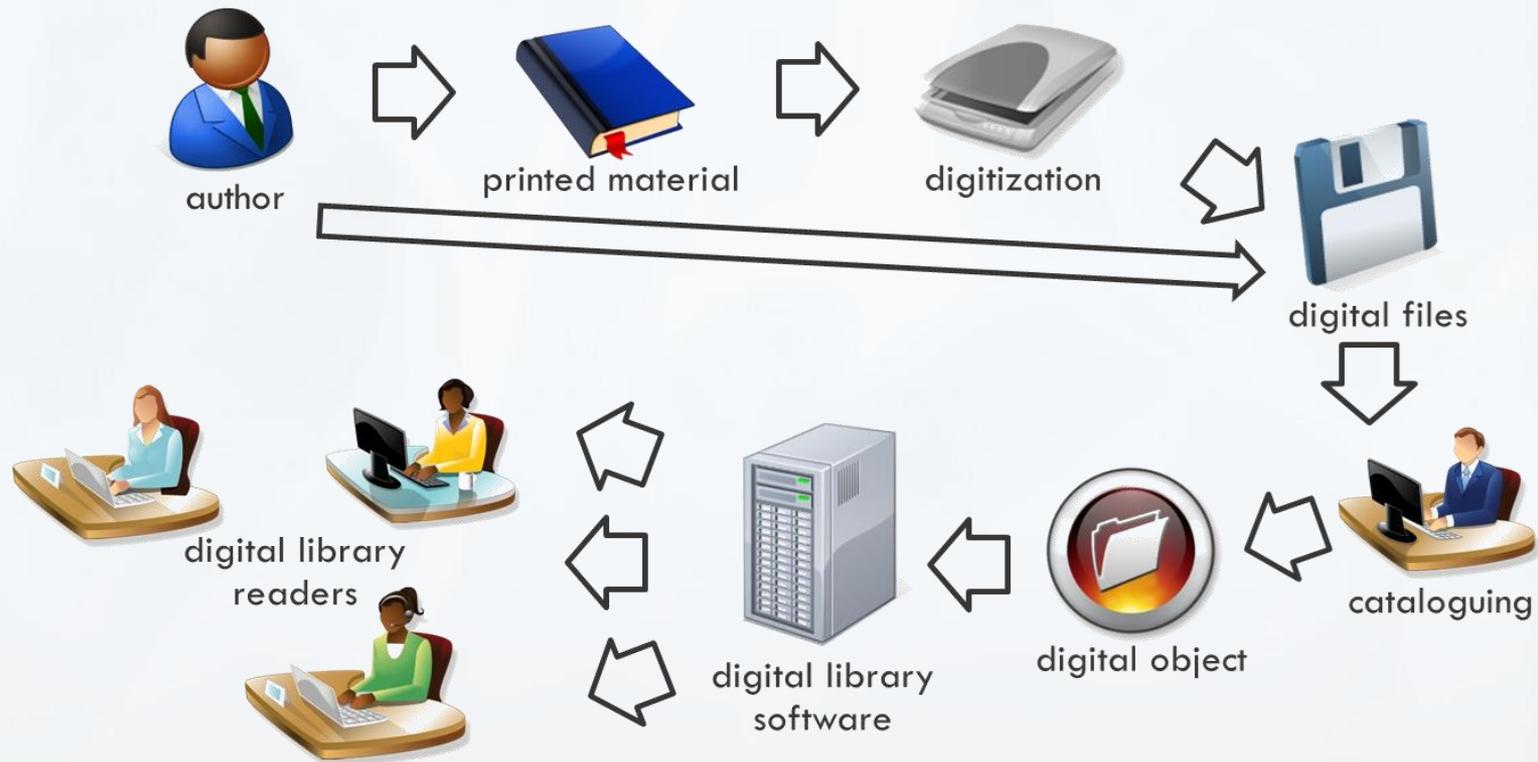

Digital library as an enterprise

- Digital library elements
 - Content
 - Digital objects and collections
 - People
 - Staff
 - Users
 - IT infrastructure
 - Hardware
 - Software
 - Organizational elements
 - Plans, procedures, guidelines, ...
- “Cowboy coding” is not the best approach

What is the purpose of a digital library?

How does a digital library work?

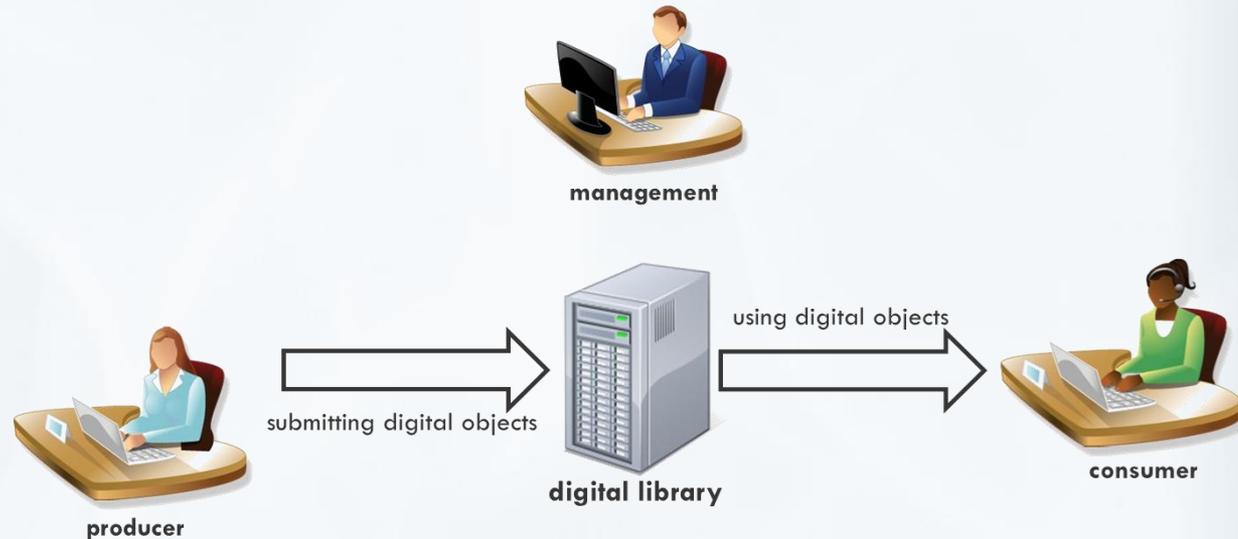

What are the benefits of using a digital library?

- 24/7 availability of digital resources
- Easy browsing and searching (incl. content)
- Preservation of the digital materials
- Easy update of the information
- New forms of information
- Automated information exchange with external software systems
 - Why this is important?
 - Send the data where the users already are

Who interacts with a digital library?

According to OAIS model:

- Producers – specialized staff who is responsible for submitting new digital objects to a digital library
- Consumers – also called readers, with no real duties, use materials available in a digital library (searching, browsing)
- Management – defined strategy, rules and procedures that need to be followed in relation to a digital library

Examples of popular digital libraries

- Project Gutenberg (<http://www.gutenberg.org/>)
 - It is commonly presupposed that it was the first digital library ever created
 - Started by Michael Hart in 1971 with the digitization of the United States Declaration of Independence.
 - The mission is to encourage the creation and distribution of eBooks
 - Powered totally by volunteers
- World Digital Library (<http://www.wdl.org/>)
 - Initiative of UNESCO and Library of Congress, launched in April 2009
 - Mission: “The World Digital Library makes available on the Internet, free of charge and in multilingual format, significant primary materials from countries and cultures around the world”
- More examples are in the course

Session 4: Digital libraries basics
Part 2: Case study: Digital libraries infrastructure in Poland

Speaker: Marcin Werla (mwerla@man.poznan.pl)

Education and Culture DG

Culture Programme

Digital libraries in Poland: Case study

- Organizational models
 - Institutional digital libraries – single institution is giving on-line access to its resources
 - Consortial digital libraries – several institutions are sharing single digital library to give access to (selection) of its on-line resources
 - Scope of cooperation may be different
 - Regional
 - Thematic
 - Institutional
 - What are possible benefits of such cooperation?
 - Cost effectiveness
 - Exchange of knowledge
 - New ideas and projects
 - What are possible negative effects?
 - Lower institutional visibility
 - Difficulties with significantly different kinds of collections

Digital libraries in Poland: Case study

- Short history
 - First works started in 1999
 - First digital library deployed in 2002
 - Wielkopolska Digital Library (<http://www.wbc.poznan.pl/>)
 - Regional digital library
 - The largest digital library in Poland (almost 160 000 objects)
 - Second digital library deployed at Wroclaw University of Technology in 2004 after digital libraries workshop organized by PSNC
 - Later it was transformed into Dolnoslaska Digital Library (<http://www.dbc.wroc.pl/>)
 - In 2005 first digital library supported from EU funds was launched: Kujawsko-Pomorska Digital Library (<http://kpbc.umk.pl/>)

Digital libraries in Poland: Case study

- Short history
 - In 2007 a Polish librarians community named Library 2.0 was established
 - Its discussion forum quickly became a place for knowledge exchange about digitization and digital libraries
 - In 2007 Polish metadata aggregator was launched – the Digital Libraries Federation
 - In 2009 cooperation with Europeana was established

Digital libraries in Poland: Case study

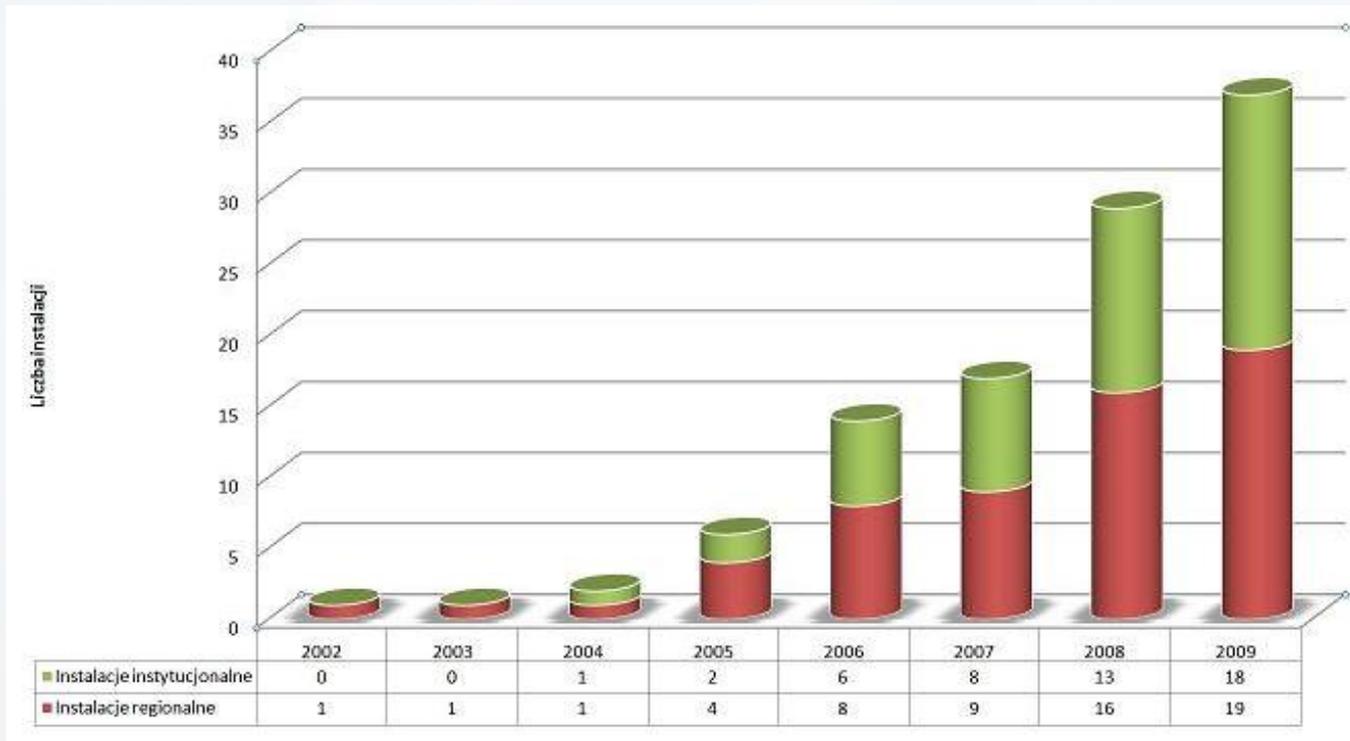

- Examples:
 - Non-government institution:
 - Public Digital Archive of Agnieszka Osiecka
<http://www.archiwumagnieszkosieckiej.pl/dlibra>
 - Institutional
 - e-library of the Warsaw University Library
<http://ebuw.uw.edu.pl/dlibra>
 - Regional
 - Pomeranian Digital Library
<http://pbc.gda.pl/dlibra>

Digital libraries in Poland: Case study

- Examples:
 - Thematic
 - Design Your Benefit
<http://biblioteka.zsz.com.pl/dlibra>
 - Pedagogical Digital Library
<http://dlibra.up.krakow.pl:8080/dlibra/dlibra>
 - Consortial
 - Digital Repository of Research Institutes of the Polish Academy of Sciences
<http://rcin.org.pl/dlibra>
 - Virtual Library of the FIDES Federation
<http://digital.fides.org.pl/dlibra>

Digital libraries in Poland: Case study

- Polish Digital Libraries Federation – History
 - The number of digital libraries in Poland was growing quite intensively

Digital libraries in Poland: Case study

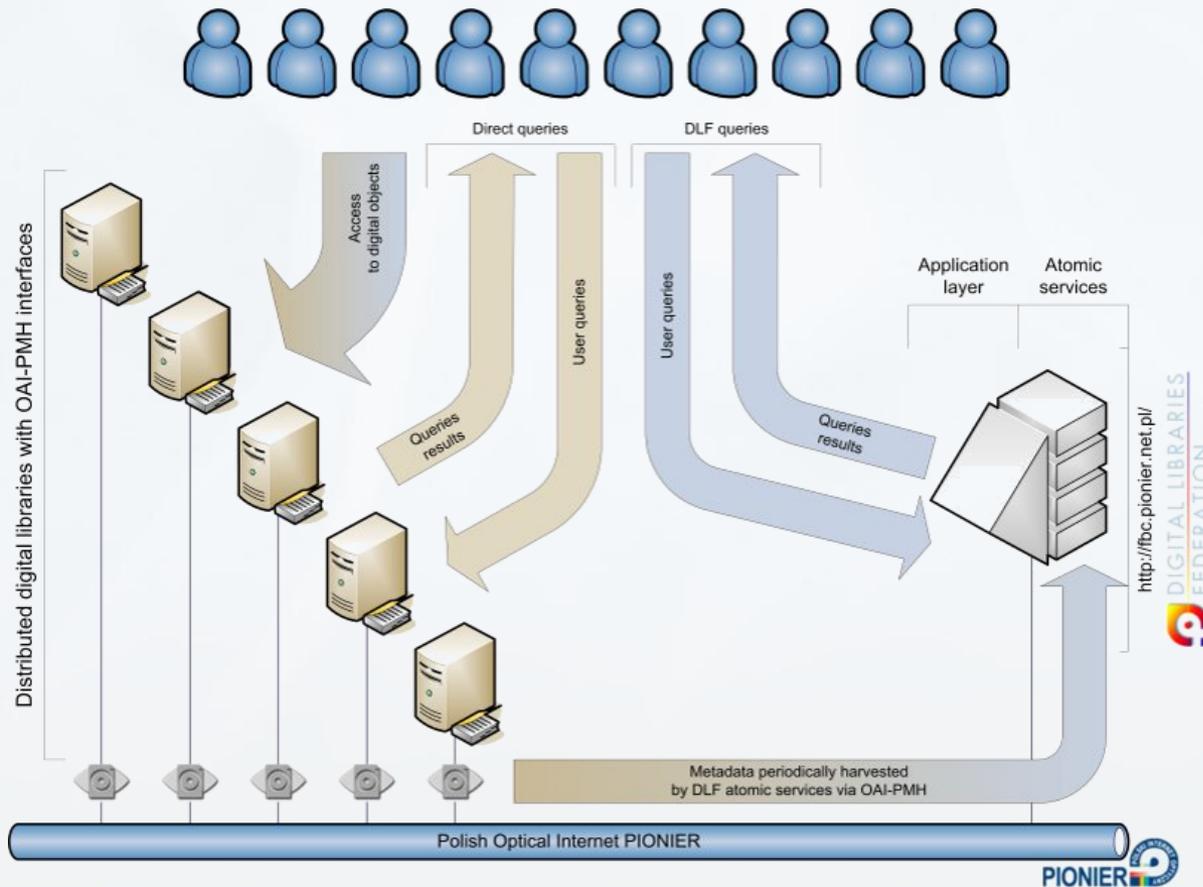

- Polish Digital Libraries Federation – History
 - The number of digital libraries in Poland was growing quite intensively
 - There was a need for single access point to resources of these libraries
 - Why Google was not enough?
 - Mix of high quality trusted content and... junk
 - Lack of deeper analysis of digital libraries data
 - In 2007 the Digital Libraries Federation portal was made available publicly by PSNC under <http://fbc.pionier.net.pl/>
 - Now it gives access to over 930 000 of digital objects from over 70 different digital libraries, museums and archives
 - The number of participating institutions is over 300

Digital libraries in Poland: Case study

- Polish Digital Libraries Federation –
Functionality
 - Basic and advanced search
 - Search by identifier
 - Browse
 - Recently added
 - Recently displayed
 - Most frequently displayed
 - Recommended
 - Source of information about Polish digital libraries
 - Source of knowledge for Polish digital librarians
 - Coordination of digitisation

Digital libraries in Poland: Case study

- Polish Digital Libraries Federation – Architecture

Digital libraries in Poland: Case study

- Polish Digital Libraries Federation – Cooperation
 - DLF is a service designed to provide data both for end users and external services
 - Europeana
http://europeana.eu/portal/search.html?query=*&qf=PROVIDER:Federacja+Bibliotek+Cyfrowych
 - DART-Europe
<http://www.dart-europe.eu/browse-results.php?dsorce=27>
 - Google
<https://www.google.pl/search?q=site%3Afbcr.pionier.net.pl%2Fid>
 - This makes life of Polish digital librarians easier 😊
 - Why?

ACCESS IT Plus – Training workshop in Veria (March '12)
Session 4: Digital libraries basics
**Part 3: When should I create my own digital library and
how to do it?**

Speaker: Marcin Werla (mwerla@man.poznan.pl)

Education and Culture DG

Culture Programme

Building digital library

- Should I build my own digital library or join some existing one?
 - What requirements does the digital libraries building software have?
 - Is the institution rich enough to keep servers satisfying this need and a proper network connection?
 - What is the amount of materials, which are planned to be available in the digital library?
 - How many users will potentially be using the library?
 - Whether the institution do employ (or possess financial resources to employ) a qualified IT staff?
- What are the alternative options? Are there any public or commercial bodies I can join instead?
- Maybe I should establish new consortium and build digital library for it?

Building digital library

- IT infrastructure scalability – parameters to consider
 - The amount of users using the system simultaneously
 - The amount of publications in the digital library
 - The pace of releasing new publications
 - The size of publication files and number of those files
 - Whether the publications have good text information, which will be indexed (e.g. OCR)
 - The complexity of publication description and the level of minuteness of this description

Example: <http://kpbc.umk.pl/stats/>
- The system load will increase in time and can radically change e.g. in association with events
- There is no easy formula to calculate what hardware should you buy
- So: what you can do when your servers are too busy?
 - Hardware side
 - Software side

Building digital library

- Hardware infrastructure –three basic costs variants
 - Fully local infrastructure – local server(s) in local server room
 - Co-located infrastructure
 - Your server in commercial server room
 - Hired server in commercial server room
 - Cloud infrastructure
 - E.g. Amazon S3 + EC²
 - <http://aws.amazon.com/ec2/pricing/>
 - <http://calculator.s3.amazonaws.com/calc5.html>

Building digital library

- Choosing software
 - Digital library software
 - Greenstone (<http://www.greenstone.org/>)
 - Dspace (<http://www.dspace.org/>)
 - Eprints (<http://www.eprints.org/>)
 - dLibra (<http://dlibra.psnc.pl/>)
 - ...
 - Operating system
 - Database
- Which criteria use to choose software components?
 - The most important one is: use those which you will be able to configure and maintain

Building digital library

- Planning, organizing, management
 - Identifying, planning and organizing all tasks which are necessary for activating and keeping the digital library
 - Start up stage
 - Regular activity
 - Aspects which have to be covered include
 - staff
 - tasks division
 - areas of responsibility
 - work organization and efficiency
 - monitoring
 - risks
 - ...
 - „Not plan but planning” – constant monitoring of plan execution and plan adaptations if necessary
 - THIS PART IS NOT COVERED BY OUR COURSES

Building digital library

- Designing information architecture
 - Metadata schema is a set of elements which will be used for describing digital objects
 - There are different types of metadata:
 - descriptive
 - administrative
 - technical
 - Administrative and technical metadata are less problematic in a sense that it is easier to define needs which should be fulfilled by such metadata
 - Aim of descriptive metadata is to allow discovery of digital object and initial assessment about particular object usefulness
 - Therefore descriptive metadata schema must take into account not only needs of librarians but also needs of users
 - Clear definition of such needs may be problematic and such needs may evolve

Building digital library

- Designing information architecture
 - Definition of a metadata schema for use in digital library includes
 - Set of elements with definitions of their meanings
 - Set of rules e.g.
 - Which elements are obligatory
 - How to encode specific elements (creator, date, language etc.)
 - Set of guidelines e.g.
 - How to choose title if there is more than one (cover, title page etc.)
 - How to choose subject keywords
 - How to express size of the object
 - In case of digitisation: which object to describe original or digitized?
 - It is worth to publish such guidelines on-line for comments and collaboration

Building digital library

- Designing information architecture
 - Good starting point is to use existing well established metadata schema like Dublin Core Metadata Element Set or Dublin Core Terms
 - Is there possibility to import already existing metadata?
 - Multilingualism of metadata is also worth to consider

Building digital library

- Designing information architecture
 - Above the digital object level the information architecture should include
 - Complex objects (e.g. journals as a whole)
 - Collections
 - Especially useful for users which do not know what to search for
 - » How many of such users can be?
 - Different scopes of collection
 - One object may belong to several collections

Building digital library

- Selection criteria
 - There can be different selection criteria for materials to be placed in digital library e.g.:
 - Condition of objects
 - Popularity of objects
 - Cultural value of objects
 - Thematic scope of a digital library
 - Relation to some important event
 - Requirements of the digital library/digitization funding body

Building digital library

- Digital objects formats
 - Again selection criteria may vary
 - What to take into account
 - Users capabilities
 - What software users have installed on their PCs?
 - Users needs
 - What functionality users need? E.g.
 - » Zooming
 - » Rotating
 - » Text searching
 - Digital library ecosystem
 - What formats are understandable by external systems?
 - » Google Scholar

Building digital library

- Releasing digital library
 - Besides digital objects you have to prepare
 - Auxiliary materials – help pages, license information, about information
 - Possibility of sending feedback
 - VERY IMPORTANT: Remember about usability testing of the end user interface, preferably with the participation of end users representatives
 - Finally promotion is also an important aspect which should be planned, e.g.:
 - Leaflets, posters, gadgets, articles on thematic conferences, news releases
 - Official opening of a digital library with media and VIPs participation
 - Social networks like Facebook
 - Your local Wikipedia

Things to discuss

- Are there any existing digital libraries in participants' countries? What is the source of funding?
- What IT infrastructure is used in your libraries to handle digital libraries?
- Are users aware of digital libraries existence? What do they think about them? What are they used for?
