How to set up a metadata aggregator

Metadata aggregators

- According to the present version of Europeana Outline Functional Specification tasks for the aggregator are:
 1. To gather the information about content providers and their information systems
 2. To gather the metadata of objects that should be visible in Europeana
 3. To remove duplicates, clean-up the metadata, normalize it and enrich
 4. To confirm the accessibility of digital objects
 5. To expose the aggregated metadata for Europeana via the OAI-PMH protocol

http://dev.europeana.eu/public_documents/EDLnet%20D2.5_Outline_Functional_Specifications20090301_version%201.7_consWithoutHistory_lossless.pdf

Available tools - aggregators

- OAIcat
- RepoX
- Celestial (Perl)
- Other tools
 - OAIBiblio (PHP)
 - Ruby-oai (Ruby)
 - pyoai (Python)

Available tools - aggregators

- List of tools comes from Julie Verleyen presentation : „Metadata Harvesting”
 - http://www.europeanalocal.eu/eng/content/download/2808/32628/version/1/file/KSW_13-01-2009_Julie_METADATA_HARVESTING.ppt

Comparision framework

- OAI-PMH 2.0 compliance
- ESE compliance
- OAI-PMH implementation
 - Deleted records support
 - Selective harvesting capabilities
 - Incremental harvesting support
- License/Price
- Support
- Content providers information gathering aids
- Other services based on aggregated metadata
- Underlying technology
- Market share

OAI Cat

- OAI Cat is developed by OCLC
 - <http://www.oclc.org/research/software/oai/cat.htm>
 - <http://alcme.oclc.org/wikid/CollectionOaiCat:FrontPage>
- „*OAI Cat was written as **open source** and includes a number of abstractions that allow it to be **customized** and **configured** for use with a variety of data sources.*”
- Framework complaint with OAI-PMH v2.0
- License: Apache Software Lic. V2.0
- Java based application

OAIcat

- OAIcat is included in the **Dspace** distribution
- According to the UIUC OAI-PMH registry, OAIcat is used in **532** of **2242** known OAI-PMH repositories
 - <http://oai.grainger.uiuc.edu/registry>ListToolkits.asp>

OAI Cat

- Supports OAI sets, resumptionToken and deleted records
- It can expose any metadata scheme
- It can be also used to create aggregator
 - By addition of an OAI-PMH harvester

RepoX

- REPOX - A Metadata Space Manager
 - <http://repox.ist.utl.pt/>
- REPOX allows to:
 - Aggregate metadata from various sources
 - Expose aggregated metadata through OAI-PMH interface
- License: GPLv2
- Java standalone application with web GUI

RepoX

- Multiple harvesting jobs, Scheduler
- Basic statistics
- Management of XML metadata repository
 - Versioning and identification of records
 - Different metadata format
 - User interface to create metadata crosswalks:
Schema mapper
- OAIcat + oaiharvester2 (OCLC) based
- Supports :
 - OAI sets, deleted records and resumption tokens

Celestial

- Celestial (Perl-based)
 - <http://sourceforge.net/projects/oai-perl>
 - OAI aggregator/cache application that imports OAI metadata from version 1.0,1.1,2.0
 - License: GPLv2
 - Allows to re-expose that metadata through OAI-PMH 2.0 interface
 - Default configuration supports only OAI-DC format but it can be adjusted

Celestial

- It supports OAI sets, deleted records, resumption token
- It is used in Eprints platform
- Celestial requires:
 - oai-perl v2, MySQL, Perl 5.6.x and a CGI-capable web server

DLF aggregation platform

- PIONIER Digital Libraries Federation
 - <http://fbc.pionier.net.pl/>
- Free software package which can be used to create aggregator – work in progress
- Java-based aggregation platform
- Information about content providers, harvesting statistics
- Duplicates detection, coordination of digitization

DLF aggregation platform

- Information about content providers
- Statistics
- Duplicates detection, coordination of digitization,
- Dynamic OAI-PMH sets support
- Allows to expose DC or ESE

DLF aggregation platform

- Supports OAI 2.0, sets (static and dynamic), incremental harvesting, resumption token, deleted records
- DLF is a Polish national aggregator

OAI-PMH interface validation

- How to check OAI-PMH compliance?
- OA IRepository Explorer
 - <http://re.cs.uct.ac.za/>
 - Website which allows to check correctness of OAI-PMH interface
- Europeana Content Checker Ingestor
 - <http://contentchecker.isti.cnr.it:8080/portal/>
 - Documentation is available at:
 - <http://europeanalocal.avinet.no/viewtopic.php?f=5&t=22>

Basic requirements

- Each DLF content provider have to fulfill some basic requirements
 - Need to have a valid OAI-PMH 2.0 interface
 - Validation using OAI Repository Explorer
 - Register and validate repository at:
 - <http://www.openarchives.org/Register/BrowseSites>
- Usually we don't allow ports different than 80
 - ~~<http://man.poznan.pl:8080/oai/>~~
- Repository must have a domain address
 - ~~<http://192.168.128.1/oai>~~

Basic requirements

- At the moment content providers don't have to sign any agreements
- Europeana Office is working on a formal agreement which will formalize cooperation between Europeana Office and aggregators
- Aggregator takes all the responsibility for content which is submitted to Europeana
 - In the boundaries described in an agreement

Common pitfalls

- Repository is down/unavailable
- Metadata contains characters which are not allowed in XML
- XML syntax errors
- Short lifetime of resumptionToken

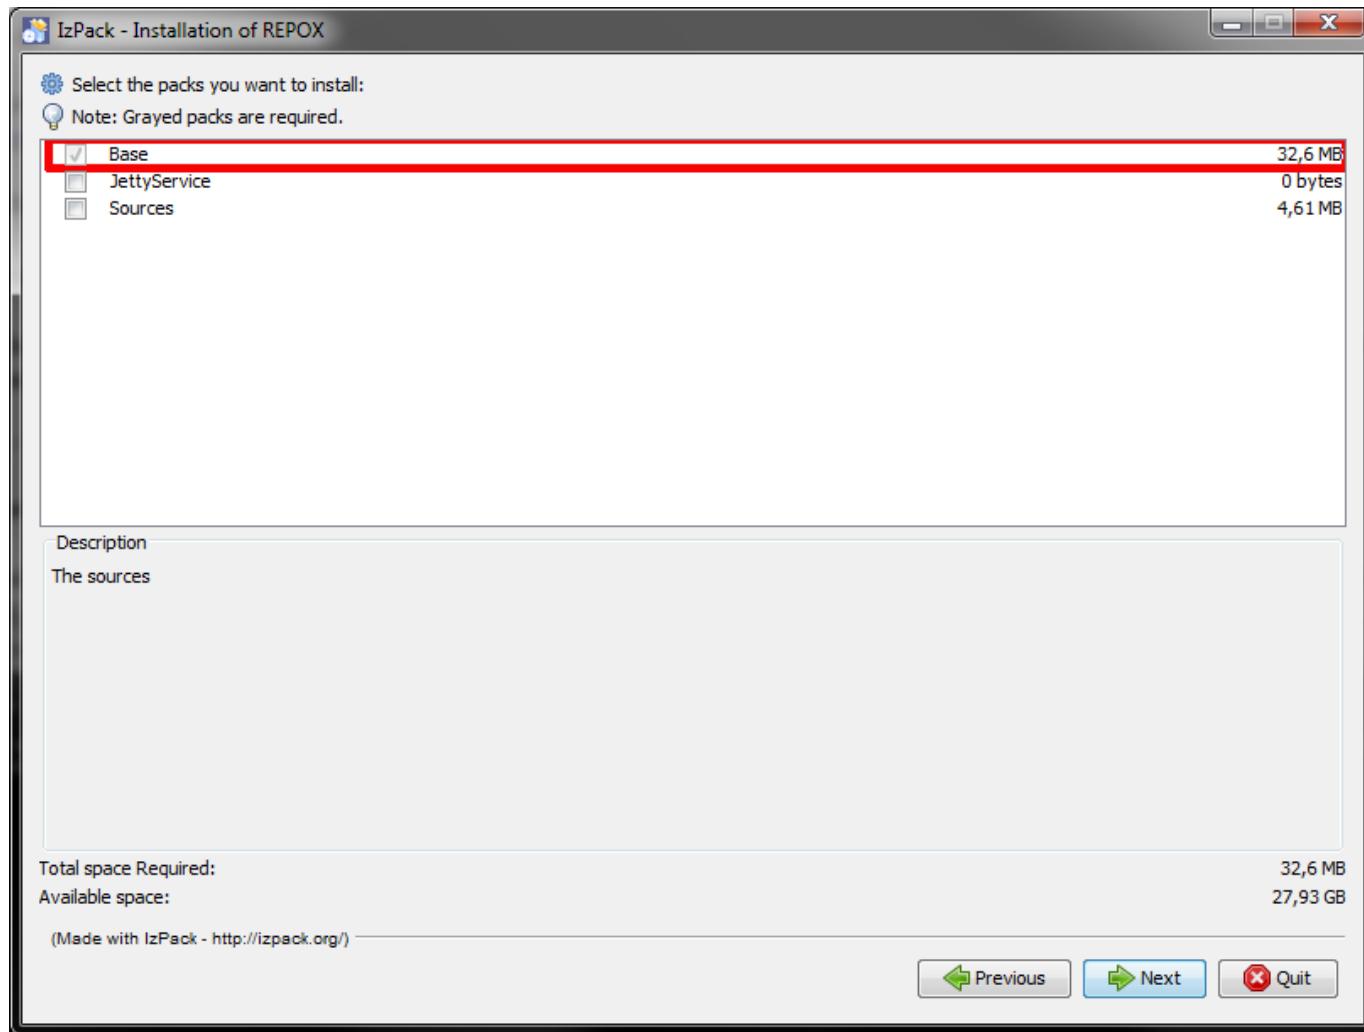

Short demo

- How to setup a metadata aggregator using
 - RepoX
 - DLF aggregation platform

RepoX - installation

- Ensure that you have Java 6 installed
- Download RepoX 1.4.3
 - http://repox.ist.utl.pt/REPOX_1.4.3-installer.jar
- Installation
 - Run : java -jar REPOX_1.4.3-installer.jar
 - Don't check install "Jetty Service"
 - Don't install RepoX in path with whitespace
 - e.g. ~~c:\Program Files\repox~~
 - Use e.g. c:\repox

RepoX - installation

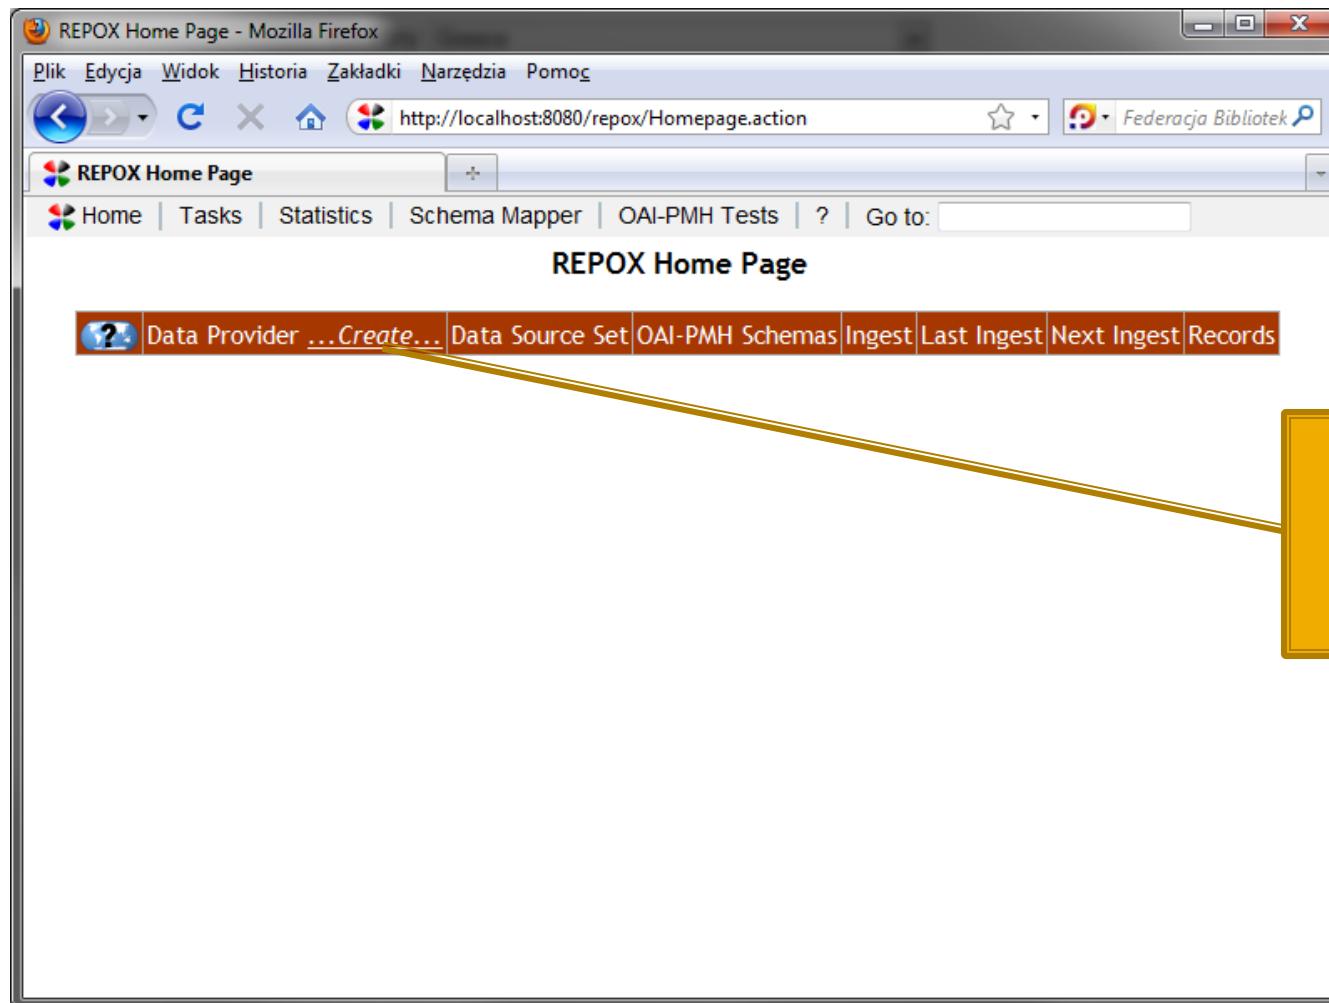

RepoX - installation

- After installation go to RepoX folder run terminal and type in:
 - cd jetty
 - java -jar start.jar
- Now go to browser and type in:
<http://localhost:8080/repox>
- For Linux server use dedicated installer from RepoX website

RepoX - basic usage

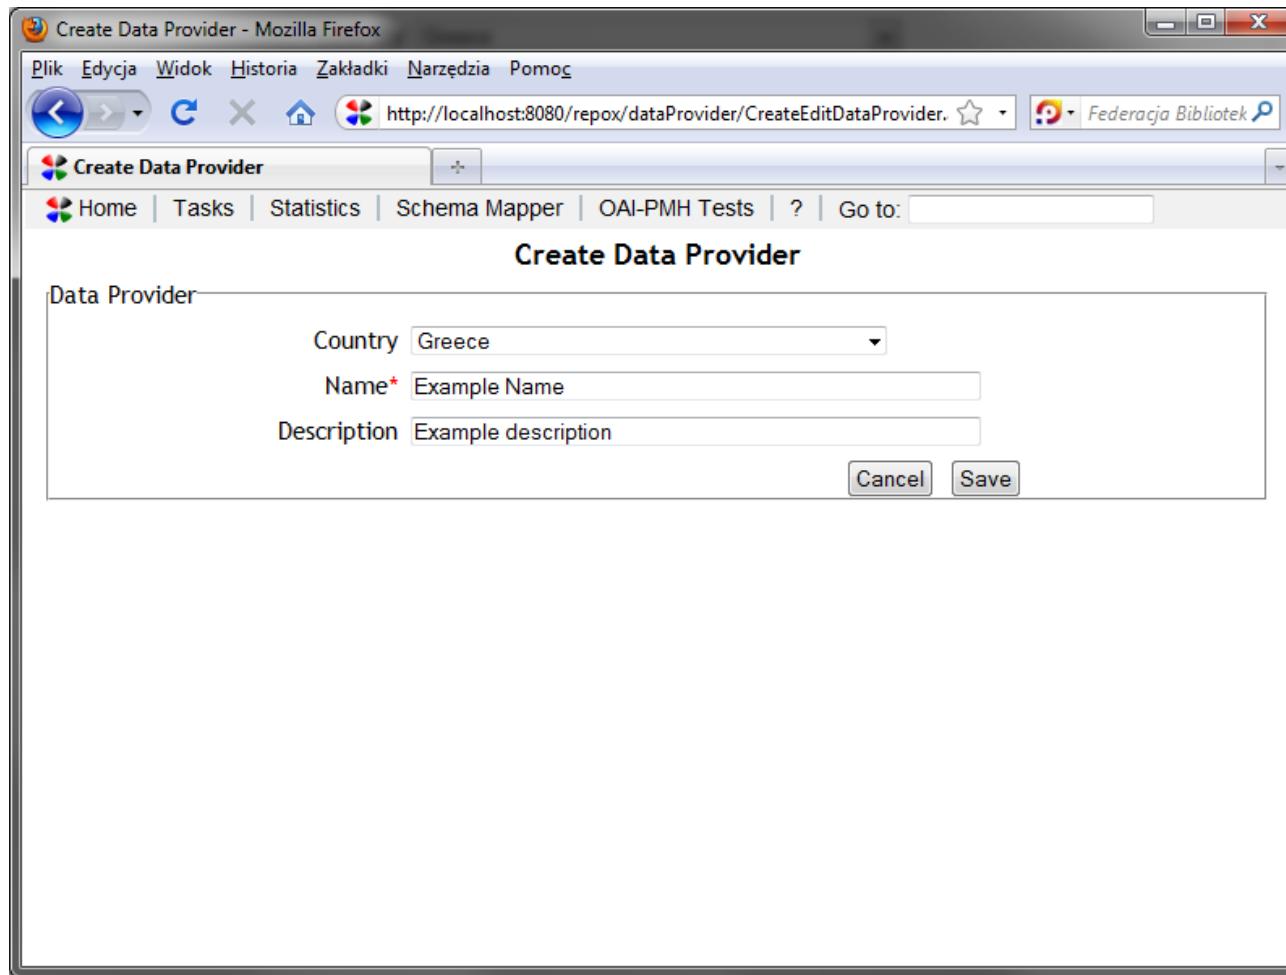

- RepoX documentation is available here:
 - <http://repox.ist.utl.pt/doc/usingrepox.html>
- First login, than create a Data Provider and save

RepoX - basic usage

Click to add Data provider

RepoX - basic usage

RepoX - basic usage

- Create a Data Source for given Data Provider by typing in:
 - OAI-PMH repository URL
 - Specifying harvested set name
 - Used metadata format
 - Name of set under which harvested data would be available in RepoX OAI-PMH interface
 - Applying appropriate transformations

RepoX - basic usage

The screenshot shows the 'Data Provider: - Create Data Source' page in Mozilla Firefox. The URL is <http://localhost:8080/repox/dataProvider/CreateEditDataSourceOAI>. The left sidebar has 'Folder' and 'OAI-PMH' selected. The main form has the following fields:

- Data Source**
 - OAI URL*: (with a 'check' button)
 - OAI Set: <ALL>
 - Metadata Format*: * Current
- Output**
 - Record Set (no spaces)*: libver
 - Description*: Example Library
 - Transformation: (dropdown menu: -, New), ,

Annotations with arrows point from the right side to specific fields:

- An arrow points from the top yellow box 'OAI-PMH repository URL' to the 'OAI URL*' field.
- An arrow points from the middle yellow box 'Harvested set selection' to the 'OAI Set' dropdown.
- An arrow points from the bottom yellow box 'Choose metadata transformation or define new one' to the 'Transformation' dropdown.
- An arrow points from the bottom yellow box 'Name of set in RepoX OAI-PMH interface. This would hold all harvested data.' to the 'Record Set (no spaces)*' field.

RepoX - basic usage

Log Files

...Create Data Source...

Harvest data from given repository

The screenshot shows the 'DataProvider Example Name' configuration page in Mozilla Firefox. The main content area displays a table with one row for the 'Data Source Set' 'libver'. The 'OAI-PMH Schemas' column contains 'oai_dc'. The 'Ingest' column shows 'OAI-PMH oai_dc'. The 'Records' column shows '0'. Below the table, there are several configuration options: Type (OAI-PMH), Local Metadata (oai_dc), Format, OAI URL (http://dspace.libver.gr/oai/request), OAI Set, ID Policy (ID Generated), Record Set (libver), Description (Example Library), Transformations, Number of Records (0), Ingest, Export, Scheduled Tasks, and Log Files. At the bottom, there is a link to '...Create Data Source...'. A yellow callout box with the text 'Harvest data from given repository' is positioned over the 'Ingest' section, pointing towards the 'Ingest Now' and 'Schedule Ingest' buttons.

- TELplus D-2.1: „OAI-PMH implementation and tools guidelines”
 - http://www.theeuropeanlibrary.org/portal/organisation/cooperation/telplus/documents/TELplus_D2.1_31052008.pdf

Best practices

- „Best Practices for OAI Data Provider Implementations and Shareable Metadata”
 - http://webservices.itcs.umich.edu/mediawiki/oaibp/index.php/Main_Page
- „Guidelines for Repository Implementers”
 - <http://www.openarchives.org/OAI/2.0/guidelines-repository.htm>

Conclusions

- Good news
 - Some tools are available so there is no need to implement everything from scratch ☺
- Bad news
 - Some technical knowledge is required
 - Tomcat, XML, XSL
