Digital Library for Business Solutions

- Designed to:
 - store,
 - manage,
 - browse,
 - search
 - accesslarge sets of various digital resources
- Scalable and distributed
- Commercial and free systems

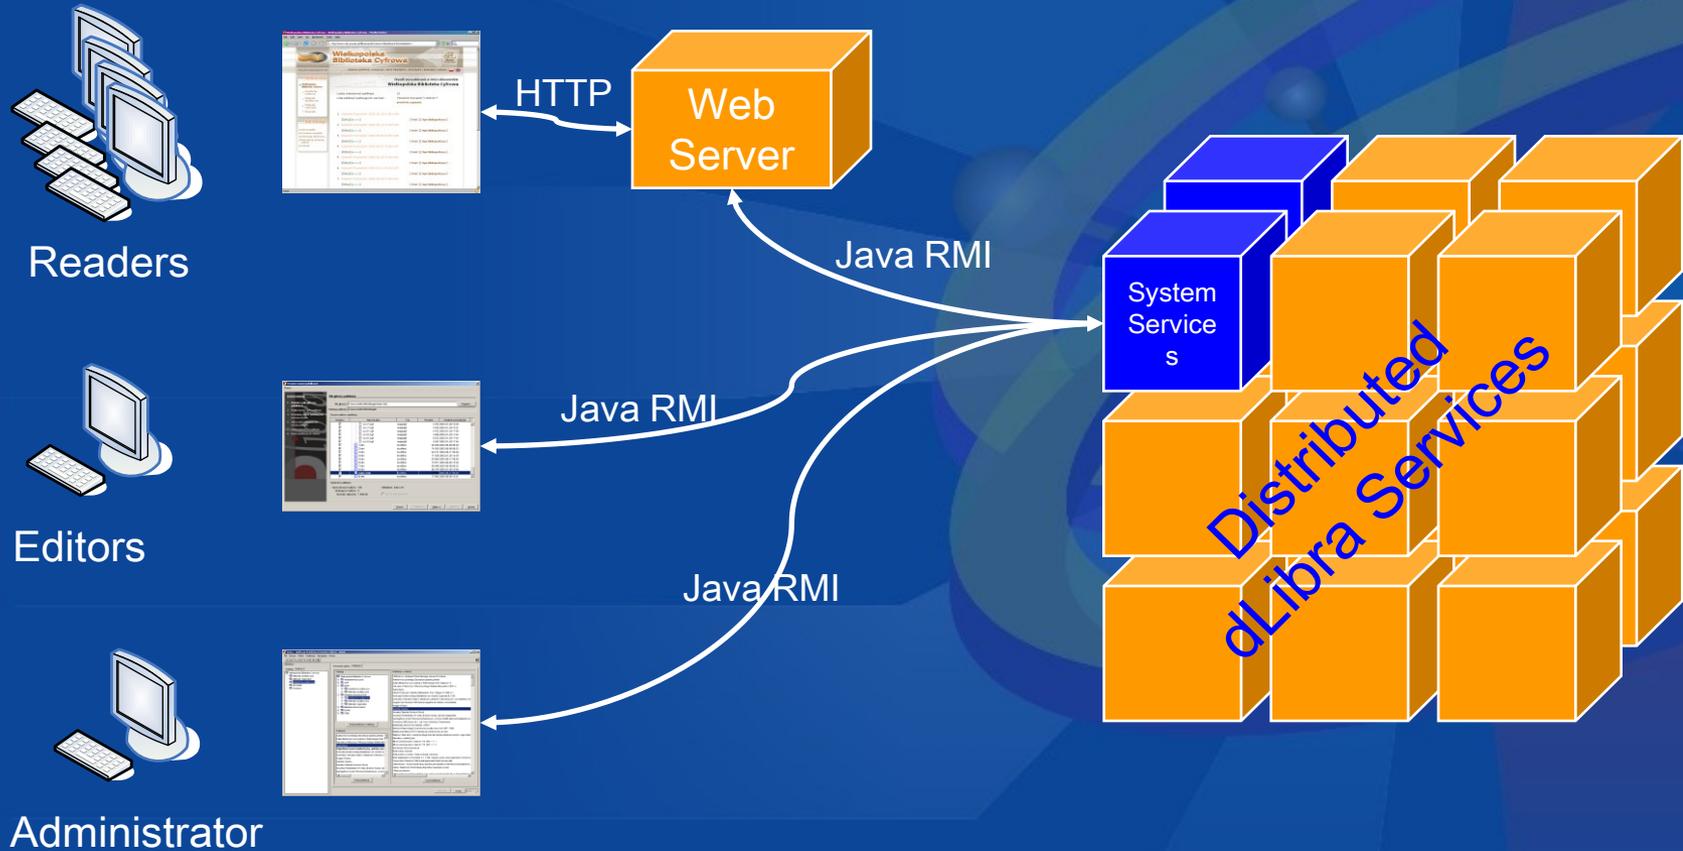

What is dLibra?

- First Polish digital library framework
- Developed in PSNC since 1999
- Now deployed in
 - Wielkopolska Digital Library (10.2002)
 - Wrocław University of Technology Digital Library (11.2004)
 - Five other test installations in different Polish universities

dLibra Features

- Multitier, distributed and portable DL platform
- Support for multiple content types
- Hierarchic collections
- Resources versioning
- Advanced support for resources' metadata
- Multiple searching mechanism
- Extended access management

dLibra Architecture

Distributed dLibra Services

- Each service can be deployed on different host
- Services does not need to know their locations
- Services communicate through events and System Services server

Distributed dLibra Services

- Metadata server
 - for storing and managing resources metadata and metadata dictionaries
 - for managing collections
- Content server
 - for storing and managing content

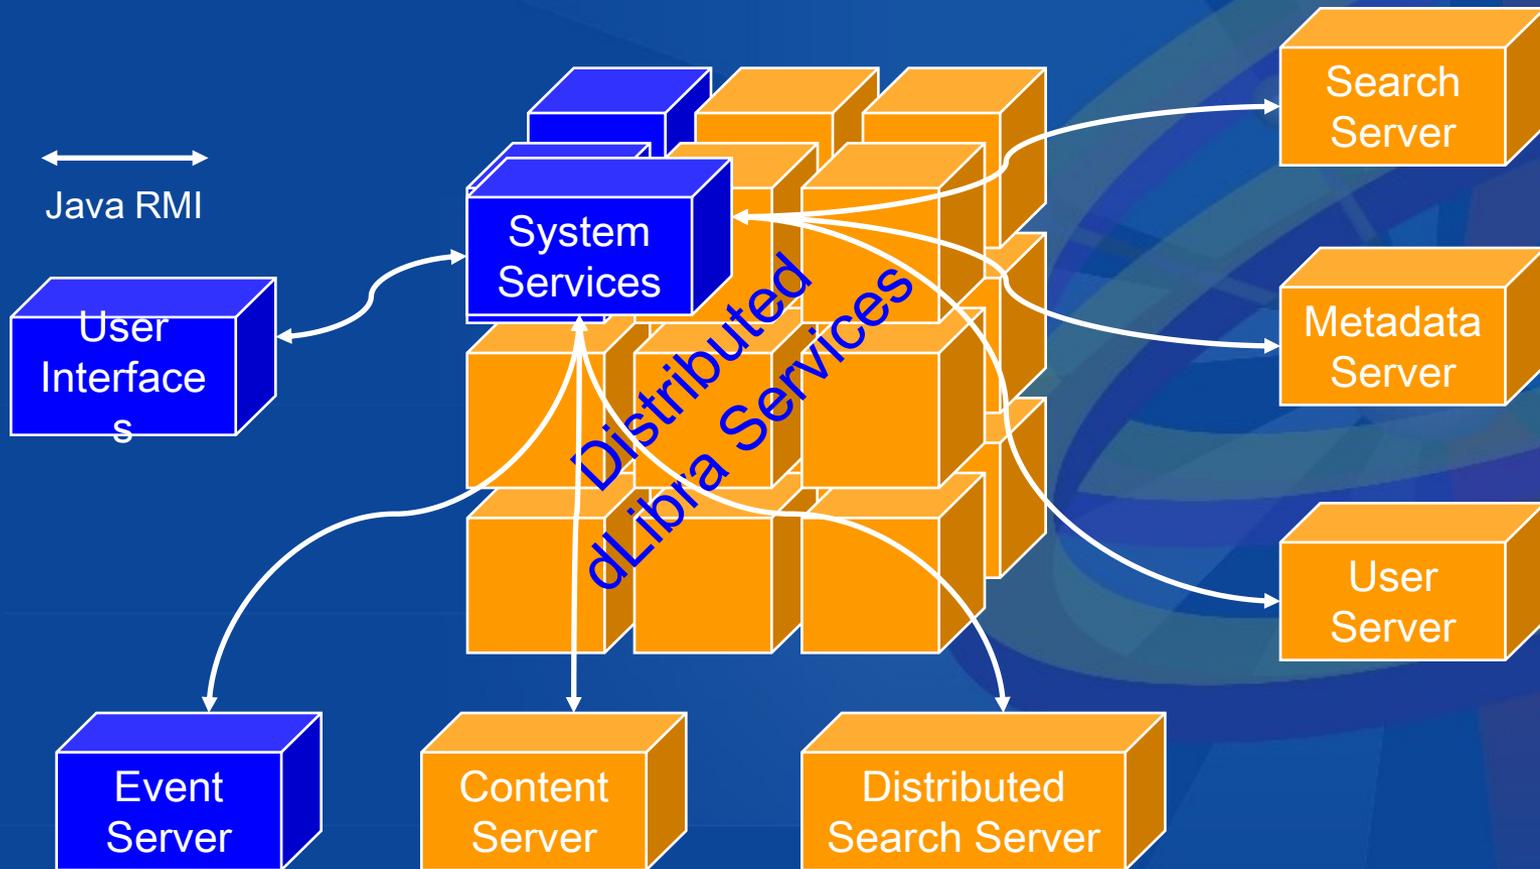

Distributed dLibra Services

- User server
 - for managing users and access rights
- Search server
 - for indexing and searching content and metadata
- Distributed search server
 - for indexing and searching multiple remote repositories

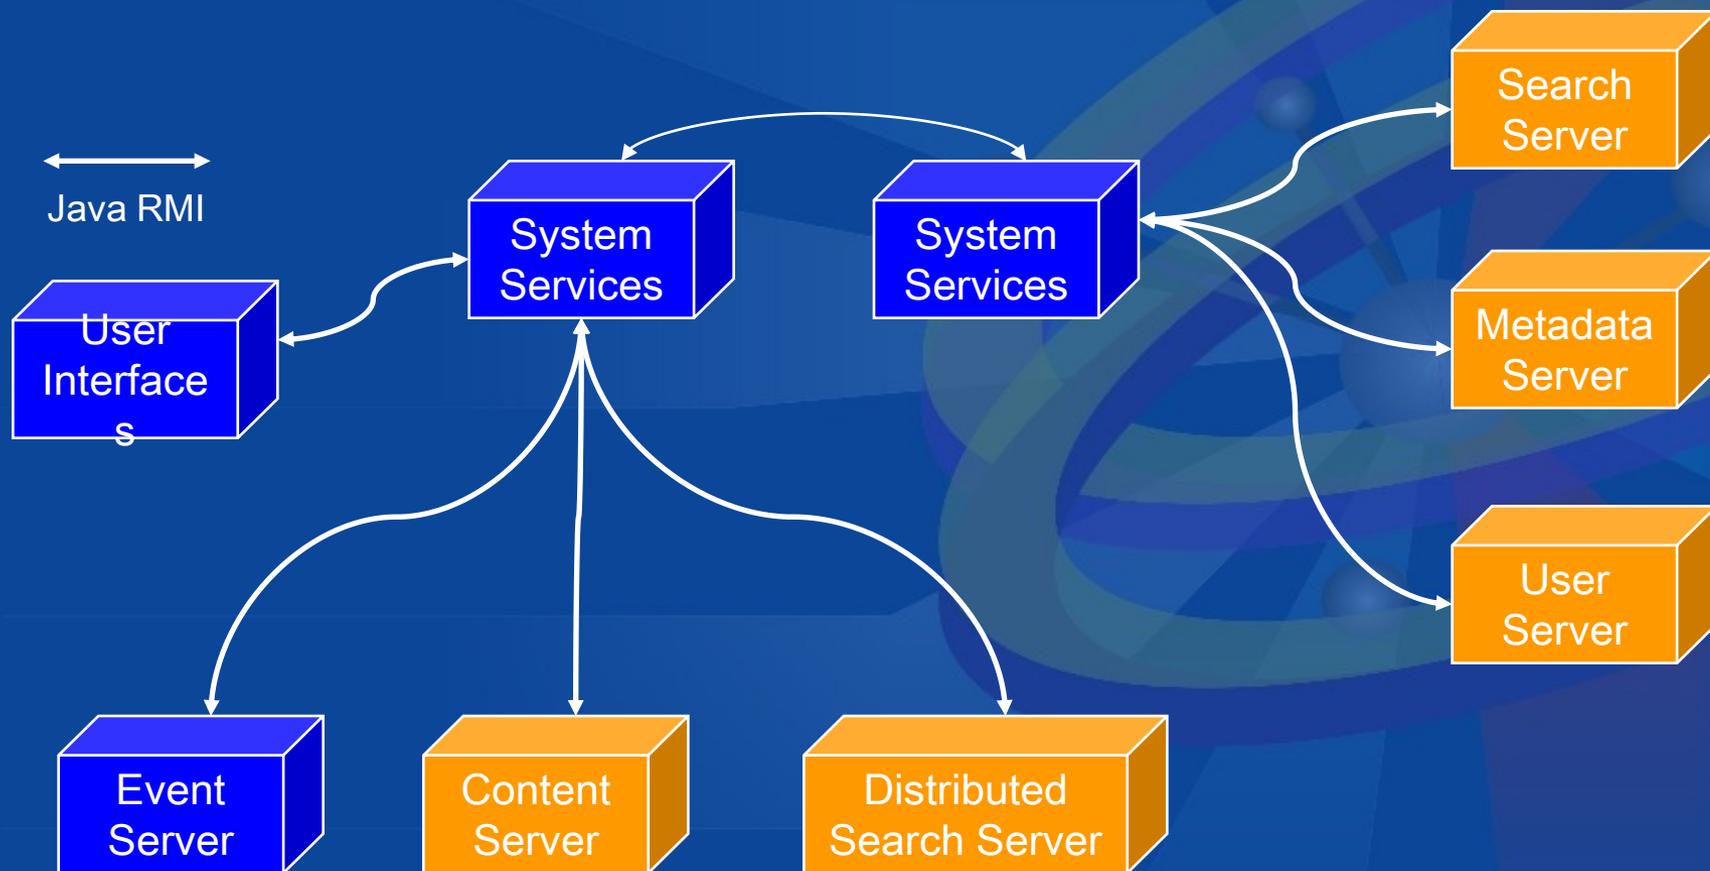

Distributed dLibra Services

- System services
 - for services registering and resolving
- Event server
 - for sending and receiving events from other services

Distributed Services Architecture

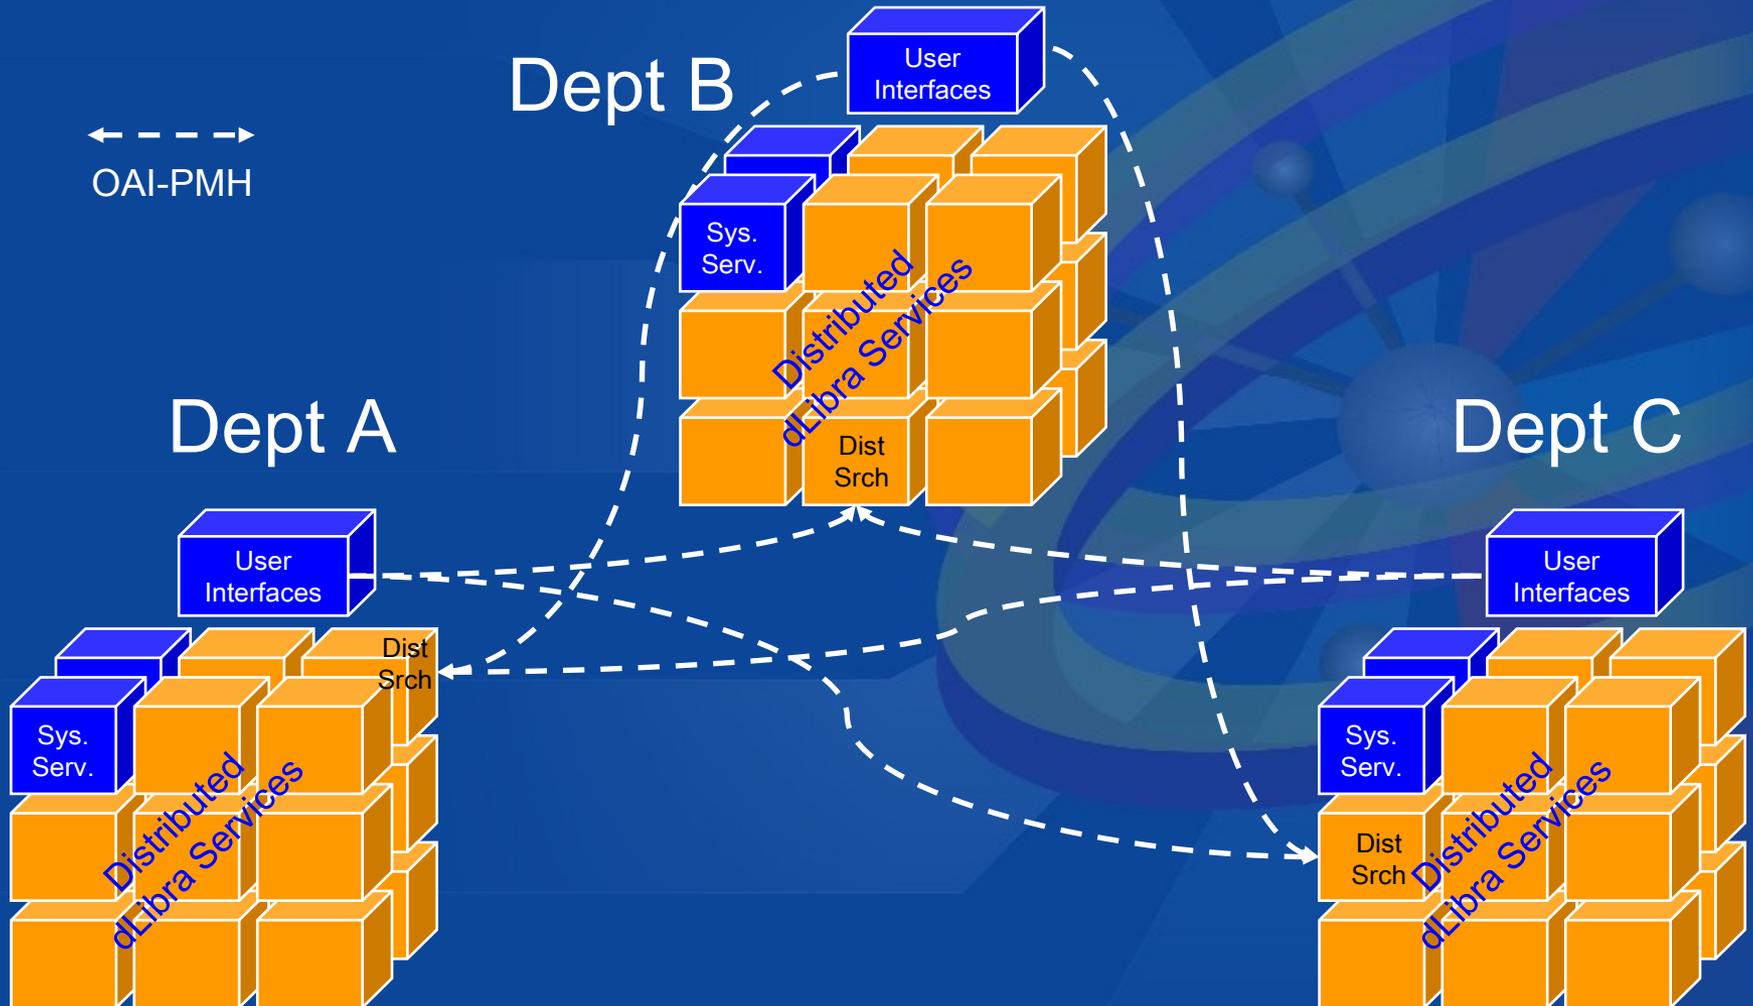

Distributed Services Architecture

dLibra in SME

- Example scenario
 - Company with several branches
 - Each branch in different location
 - Each branch has its own documents repository
 - Branch employees can modify content of this branch repository
 - Other employees can search and access repository content (if authorized)

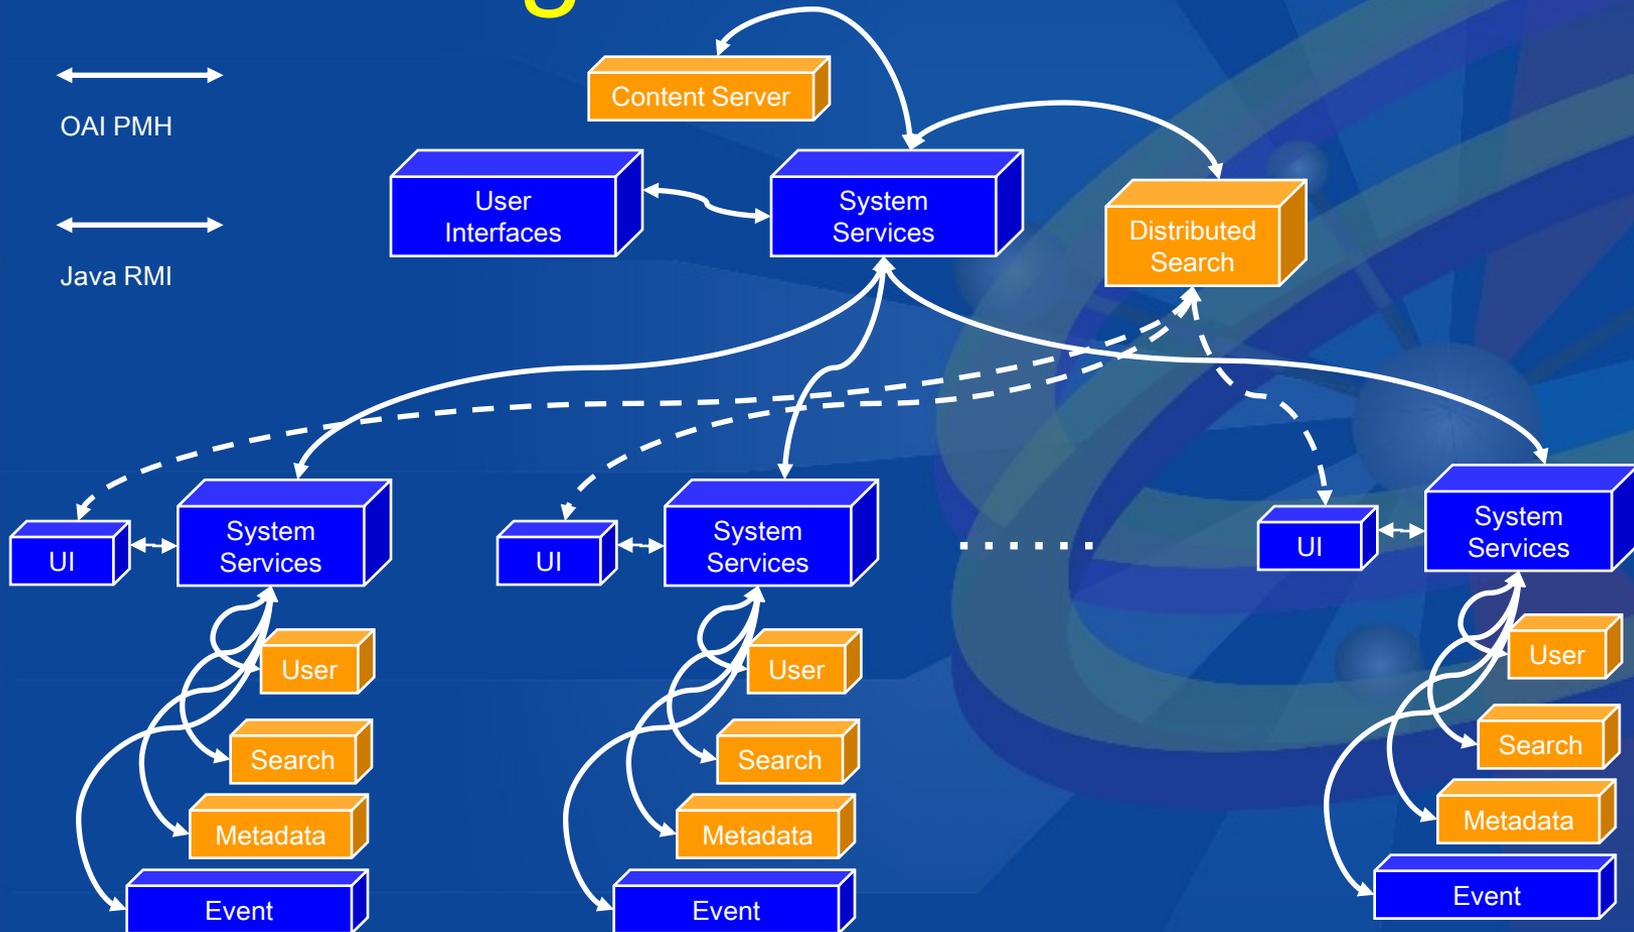

dLibra in SME

Large Scale Solution

- Example scenario
 - Company with several branches
 - Each branch in different location
 - Each branch has its own documents repository
 - Branch employees can modify content of this branch repository
 - Other employees can search and access repository content (if authorized)
 - Company uses repository to store large video files

Large Scale Solution

Future works

- Improve backup services mechanism
- Add load balancing capabilities
- Add Single-Sign-On and advanced LDAP support
- Evaluate scalability possibilities, potential bottlenecks etc.
